

The Squiggle Squad Numbers Display Cards were designed to demonstrate what numbers look like *and* how each number is formed. Displayed at their level, little learners can trace the numbers with their finger to practice and review number formation. Providing the visual, oral, and kinesthetic connection to numbers increases a child's understanding of language.

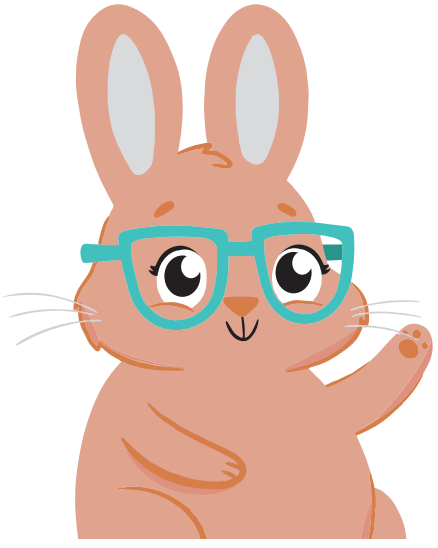

The numbers are presented alongside the quantity, represented by dots in the upper left corner of the card. Also included are display cards for plus, minus, and equal to, for children learning to recognize, name, and form these basic math function symbols.

SUGGESTED USE: Print (standard letter paper: 8.5" x 11") and laminate, if possible. Use these cards in conjunction with the Squiggle Squad Number booklet to begin building basic math skills.
